1. Executive Summary

This document establishes the authoritative glossary and taxonomy framework for artificial intelligence systems within the organization. It provides standardized terminology, risk classification systems, and functional categorization schemes to ensure consistent communication, reduce ambiguity, and support effective governance across all AI initiatives.

The glossary encompasses over 150 AI-specific terms aligned with international standards including ISO/IEC 42001:2023, NIST AI Risk Management Framework, and EU AI Act requirements. The taxonomy provides multi-dimensional classification
